

9V Center Negative  
40 mA Draw

## CONTROLS

**COMPRESSION** - Controls the amount of compressed signal mixed with the dry signal. This functions as a blend control.

**LEVEL** - Controls the output volume.

**ATTACK** - Allows you to adjust how quickly the compressor reacts to the input signal.

**RELEASE** - Allows you to adjust how long the compressor keeps working on the input signal once it has been activated.

## BRIGHT

The bright switch helps to reclaim some of the high frequencies and sparkle that are sometimes lost during compression.
